

Gravity Power Cars Tracking the GFC Energy Student Inquiry Sheet

Name _____ Class _____ Date _____

Investigation #9: Where did the moving energy in the GFC come from and how did it get in the GFC?

The moving or kinetic energy of the moving GFC originally came from the Sun.

Use the space provided to create an energy diagram to show every step in the process of transferring the energy from the Sun to make the GFC move and then stop. You might also want to create an Energy Transfer Poster on a large sheet of paper to post in the classroom.
